EDUCATION

York University — Lassonde School of Engineering

Bachelor of Science (Honours), Computer Science

Sept 2023 – April 2027

North York, ON

Relevant Coursework: Data Structures & Algorithms, Database Systems, Operating Systems, Computer Networks, Object-Oriented Programming, Software Design

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, C, C++

Frontend: React, HTML5, Next.js, Three.js, Tailwind CSS

Backend: Node.js, Express.js, NestJs, MySQL, PostgreSQL

Cloud Computing: AWS, Kubernetes, Docker, YAML, GitHub Actions

Tools & DevOps: Git, GitHub, Linux, Postman, VS Code, Vercel, Agile/Scrum, Code Review, Sprint Planning, CI/CD basics

EXPERIENCE

Software Engineer Intern

ATJ Consulting

May 2026 – Present

Toronto, ON

- Building and maintaining happyhourinmycity.com using React, Node.js, Express, and PostgreSQL, supporting business listing management and promotion workflows for 150+ partner venues.
- Develop and deploy 20 REST API endpoints for business onboarding and listing CRUD operations, reducing manual partner setup time by approximately 65%.
- Improve front-end load performance by 40% through component-level optimization, image lazy loading, and database query indexing.

Backend Developer Intern

SGMC Canada – Connect2Talent

April 2026 – June 2026

Toronto, ON

- Designed Kubernetes infrastructure consisting of 2 Deployments, 3 Services, and Traefik Ingress for containerized application delivery.
- Implemented infrastructure automation and cloud-native deployment practices that improved system maintainability, reduced manual operational overhead, and streamlined application delivery across development and staging environments.
- Developed 10+ REST API endpoints supporting event management and administrative workflows.

Software Developer Project

Souvenote

Jan 2026 – March 2026

Remote

- Delivered 8 production features over a 12-week sprint as part of a student development team including card editor, and order checkout flow.
- Designed a normalized PostgreSQL schema covering users, templates, orders, and AI-generated content metadata to support multi-user, multi-template workflows.
- Built and load-tested REST APIs with Node.js and Express, achieving sub-250ms average response times in internal testing environments.
- Enhanced platform security and streamlined user authentication by integrating AWS Cognito with OAuth 2.0, enabling secure token-based access control and scalable user management.

PROJECTS

Scrape & Summarize | Python, BeautifulSoup, OpenAI API, Flask

- Built an automated tool that scrapes any URL, extracts main article content, and produces concise LLM-generated summaries via the OpenAI API.
- Implemented rate-limit handling, exponential-backoff retries, and structured JSON output for downstream pipeline consumption.

Nutri Science | Java, MySQL, JDBC, MVC Architecture

- Developed a desktop nutrition-tracking application with a MySQL-backed data layer and full MVC separation between UI, business logic, and persistence.
- Implemented secure user account management, daily log tracking, and historical record queries with parameterized SQL to prevent injection.
- Modeled relational schema with foreign-key constraints across users, meals, and nutrient entries to ensure data integrity.
